1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

2. Claims 1-5 and 15-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Newell, III et al in view of Papazian, newly cited. Newell, III et al discloses the claimed invention except for the duration of the duty cycle being less than two minutes. Papazian teaches a system which includes a room thermostat and a timer for a gas valve. The timer is energized by the thermostat and operates the gas valve according to a duty cycle which is less than two minutes. See especially column 4, lines 19-32 and Figs. 5(a) and 5(b). Thus, to modify Newell, III et al so that the duty cycle of the air conditioning system is less than two minutes is obvious in view of Papazian for the purpose of more efficiently operating the air conditioning system.

3. Claims 7-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Newell, III et al in view of Otsuka. Newell, III et al discloses the claimed invention except for the terminal units including dampers. Otsuka teaches an air conditioning system which includes a plurality of terminal units 14 which each comprise a damper 4. It would be obvious to provide the air conditioning system of Newell, III et al with a plurality of terminal units which each have a damper, in view of Otsuka, for the purpose of more precisely controlling the air flow into the space being conditioned.

4. Applicant's arguments with respect to claims 1-17 have been considered but are moot in view of the new ground(s) of rejection.
